

## Code Alert® ICM Data Capture & Reporting

### Code Alert® Reports

#### Facility Daily Alarms & Activities

- Alarm Report
- Alarm Activity Report
- Alarm Response Report
- Care Time Report
- Activities Report
- All Activities Report
- All Other Reasons Report

#### Facility Trends

- Joint Commission Alarm Trend Report
- Joint Commission Assistance Trend Report
- Joint Commission Response Time Report

#### Staff Reports

- Users Report
- User Training Report
- Staff Care Time Report
- Staff Drill Report
- Training Report

#### Facility Maintenance

- System Maintenance Report
- Low Batteries Report
- Device Fault Report

#### Additional Reports

- Census Report
- Adjusted Band Report
- Transfer Report
- Escort Report
- Discharge Report
- Device Hardware Report
- Device Tree Report
- Transmitter Report
- Links Report
- Sensatec Report

### Point of Care Data Capture and Classification

In Senior Care communities, caregiver mobility is crucial to maintaining optimum quality of lifestyle for your residents. Caregivers can use Code Alert Integrated Care Management (ICM) to take "care" to new levels by receiving care reminders, alerts to wandering events, and life safety alarms on mobile handheld devices, such as pagers, PDAs, and cell phones. Code Alert ICM software, in combination with Cisco® mobile phones, enables caregivers to receive and resolve an event right at the point of care. After administration of care, whether in a resident room or in common areas, staff can simply document the type of care administered by selecting an Event Cause on the Cisco mobile phone. This greatly improves the accuracy of response time documentation, tracks caregiver performance, and captures resident care data.

### Use Touch-Screen to Easily Select "Event" Reasons

Care data also can be entered at a Centralized Computer. The computer's touch screen monitor and the Code Alert ICM Software's large icons allow you to select the Event Cause with little to no prior computer skills. The Event reasons can be custom-configured per facility, and/or standardized across corporations and communities.

### Documentation and Reporting Ability

Code Alert ICM Software includes 28 automated Reports. (See list at right.) This documentation can be used to tailor proactive care plans, including behavior management practices. Along with data capture comes improved analysis, informed decision-making, and ultimately better quality of care. Data can be stored in custom tailored formats. Generating and viewing Reports is easy using touch-screen commands at the Central Computer. Reports can be printed out on-demand for standardization and regulation compliance.
