

EDX™ PLATFORM

COMPREHENSIVE ENVIRONMENTAL PROFILE (CEP)

The Comprehensive Environmental Profile (CEP) represents the most accurate information collected by best-in-class device technology - automatically reported on a 24/7 basis. Using the flexible and secure EDX™ platform, our clients can determine Reporting Frequency, Automated Out-of-Range Alerts and Audit Reporting format - as each business and their regulators determine the need. For a list of commonly monitored conditions please see the reverse side of this page.

OUR INDUSTRY CUSTOMERS

IMS has deployed the EDX™ Platform to a multitude of customers and serves several industry verticals:

LIFE SCIENCES:

- McKesson Logistics Solutions
- Solvay Pharma
- Rep-Pharm

HEALTHCARE:

- Scarborough General Hospital
- William Osler Health Centre
- Humber River Regional Hospital

FOOD:

- Canada Bread
- Nestlé Canada
- Veg-Pak Produce

ENVIRONMENTAL MONITORING

Environmental Monitoring has been in demand by business for several years but as regulatory and compliance parameters change so does this industry. Companies must not only be aware of prevailing needs and solutions but of those that will be required tomorrow - and it was upon this reality that Integrated Monitoring Solutions™ (IMS) was founded.

INTRODUCING IMS

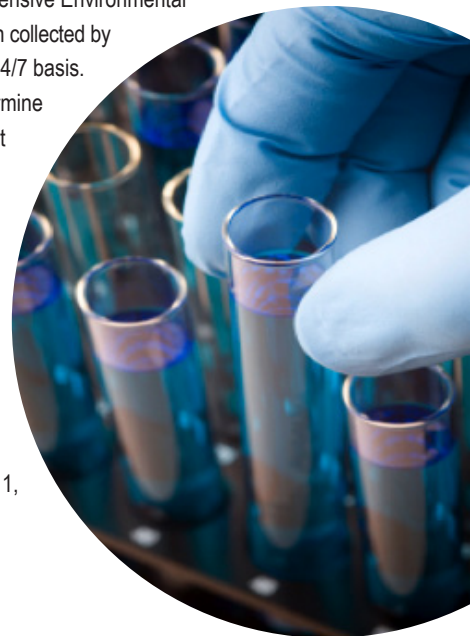

Integrated Monitoring Solutions was founded in 2002 by a group of technologists who helped define the early industry. They came together through the realization that the market would change and demand only the best technology to address the multi-industry needs surrounding Regulatory and Quality Compliance. After significant R&D and technology investment, the EDX™ Platform was born and is being used by a multitude of companies today across several industry verticals.

THE EDX™ PLATFORM

EDX™ is a flexible platform and portal that links wireless, fixed and portable cross-condition devices for facility and in-transit monitoring. EDX™ is the scalable backbone that supports both real-time and interval data collection into a central repository that creates a Comprehensive Environmental Profile (CEP). The CEP represents the most accurate information collected by best-in-class device technology - automatically reporting on a 24/7 basis. Using the flexible and secure EDX™ platform, clients can determine Reporting Frequency, Automated Out-of-Range Alerts and Audit Reporting and Trending Analysis - as each business and their regulators determine the need.

CROSS-INDUSTRY COMPLIANCE

EDX™ technology is forward looking and is designed to meet not just the needs of today but also tomorrow. Our data collection devices are manufactured within ISO guidelines, are recognized by the World Health Organization and comply with prevailing regulatory requirements including CFR 21 Part 11, Health Canada 0069 and HAACP regulations.

For more information, please call 250-860-8016 or 1-888-860-8016 or email healthcare@omegacom.ca

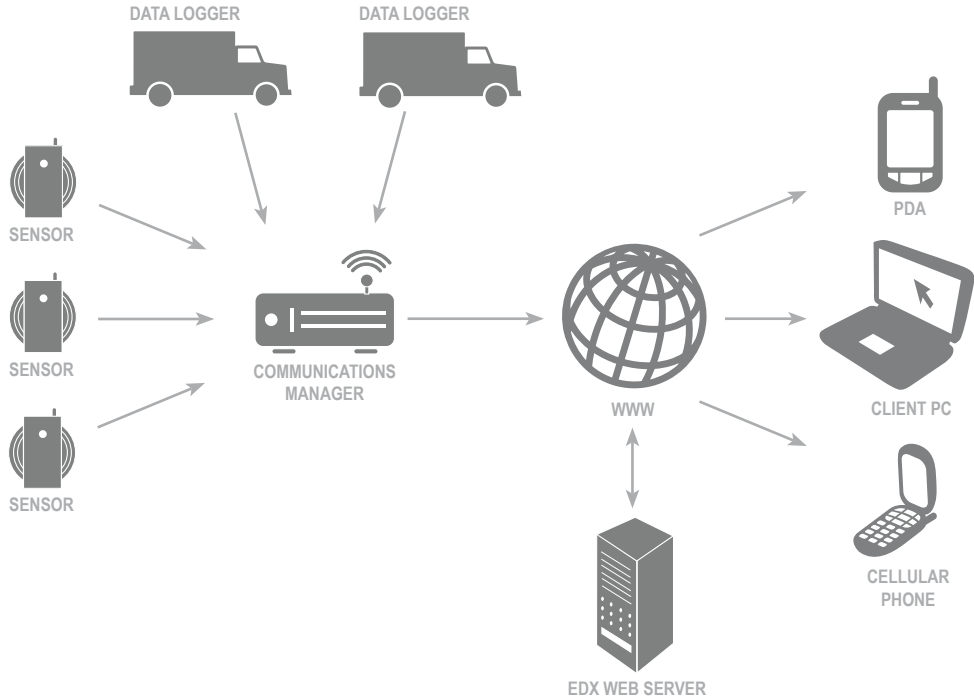

EDX™ DEVICE TECHNOLOGY

IMS has invested in the belief that the best of breed technology is required for the provision of the best service. Our patented devices are developed, manufactured and installed according to the highest standards of compliance and function.

MULTI - FREQUENCY FLEXIBILITY:
IMS devices operate across a range of wireless frequencies as the individual monitoring point defines the need. A Monitoring Solution may involve a set of both in-transit and fixed location monitoring across multiple points with varying frequency related conditions. Leveraging our flexibility, IMS can configure the best point-by-point frequencies - to deploy one solution.

MESHED NETWORKING RELIABILITY:
IMS uses its industry leading devices to submit information into a 'Meshed' Network configuration that will manage the delivery of key data. Mesh networks are 'multi-hop' systems in which devices assist each other in transmitting data packets through the network, regardless of the conditions. What this means for our clients is both complete system reliability as well as the flexibility to quickly change or extend their CEP add devices and change individual monitoring locations.

THE EDX™ SYSTEM ARCHITECTURE

EDX™ ENVIRONMENTAL CONDITION MONITORING

The EDX™ Platform is designed to monitor an extensive set of environmental conditions that can be combined to create a customized client-by-client Comprehensive Environmental Profile (CEP). IMS and EDX™ is unique in its ability to provide individual client flexibility in configuring a monitoring solution that is comprehensive, flexible and scalable. IMS has the ability to monitor almost any measurable environmental condition to meet both internal standards and regulatory compliance requirements. Some of the most commonly monitored conditions include Temperature, Humidity, Gas Emission Levels (CO₂, NO, CO), Water Level, Flow Rates, Power Consumption, Vibration, Motion – and many more. Please see our industry specific information.

IMS SERVICE COMMITMENT

IMS believes in providing partner solutions rather than just device products and services. Our deep, cross-industry experience allows us to play an important role to our clients in not only recommending the best solution - but supporting best-in-class implementation strategies and on-going program development. Our client engagements vary by industry but all strive to the common objectives of accuracy, compliance and security – with the lowest cost and highest ROI. Please talk to us about your needs.
