

Elopement Management Solution

- Reduce Risk of Elopement
- Manage “Flight Risk” Patients
- Reduce Patient Watches
- Discreet RFID Monitoring
- Global Lockdown
- Maximize Staff Efficiencies
- Scalable System
- Locking RFID Transmitters
- Meets Joint Commission Requirements

Prevent Elopement, Keep Patients Safe and Secure

Safe Place® Elopement Management Solution provides a custom configured system that works in conjunction with your current policies and procedures as an integral and vital tool by constantly monitoring all routes leading out of a designated area including doors, elevators, hallways and stairwells. The system uses active RFID transmitters to detect a potential patient elopement. Audible and visual notification elevate security in ED, Acute Care Units and throughout the entire facility.

Increase Safety and Security of “Flight Risk” Patients

30% of all inpatients entering the ED require one-to-one security. Safe Place® creates an effective process for classification of “flight risk” patients. Decrease the monopolization of Security personnel in the ED. Safe Place® is proven to generate measurable results within the first year of implementation. Beta testing sites resulted in a 60% decrease in patient watches, translating to a savings of approximately \$71,675 as translated back to patient watch time. Results included zero elopements.

Make Your Acute Care Unit a Safe Place®

Developed with Acute Care patients in mind; dementia patients, seniors, head trauma patients, highly medicated patients, any patient at risk for wandering and potential elopement and the risks that ensue. The Safe Place System provides an automated and documented method of providing patient safety and care. Safe Place is fully integratable with our Fall Management Solutions, Wireless Nurse Assistance and existing wireless communication devices for maximum efficiency and improved staff response times.

Active RFID Transmitter with Cut Band Material can be worn on Patient's wrist or ankle.
