

Wandering Management Solution

An Open Environment of Care with the Protection Needed

The Code Alert® Wandering Management Solution allows resident movement throughout the facility, while assuring those who wander the protection they need. Each exit can be monitored based on security needs, traffic, and resident population. Code Alert is right-sized for your facility ranging from an easy-to-use, scaled-down, non PC based system, to a Windows based touch screen system. Code Alert provides the protection, data documentation, and safety solutions your facility needs.

Model 30 - Perimeter Alarm Security

The Model 30 Perimeter System provides 24-hour security for complete monitoring of exits. The system alarms whenever the door is opened, unless first entering the bypass code on the keypad. Only authorized personnel with the security code may use the point of exit without triggering an alarm. Ideal for emergency exits and staff use only doors, as well as secured units.

Model 70 - Transmitter Based

The Model 70 Wandering Management System offers restraint-free monitoring of select residents at risk for elopement. Using radio frequency technology, this system uses lightweight transmitters worn by residents, receivers to detect a residents' presence, and a control unit that issues the alarm. The system can only be reset and bypassed at the monitored location using the control unit keypad. Long lasting 1.5-year and 3-year battery life transmitter models reduce your operating costs and eliminates the need to frequently order replacements.

Model 80 - Provides Resident Identification

The Model 80 Wandering Management System provides enhanced restraint-free monitoring for residents at risk of wandering. When incorporated with the Central Display Unit and software, the Model 80 system offers the ability to identify the resident by name. Mobile staff can be alerted of a resident attempting to exit a monitored zone via pagers, walkie-talkies, or Quick Look displays. In addition, extensive "real-time" managerial resident reports may be generated to identify resident patterns and incidents as well as staff response time.

RF Technologies provides Wireless Emergency Call, Fall Management, Incontinence Care, Paging Systems, and Phone System Integration.

- Reduces Risk of Elopement
- Preserves Resident Dignity
- Increases Staff Efficiency
- Maintains Home-Like Atmosphere
- Customizable and Scaleable
- Easy Access for Visitors & Staff
- Installation & Training Services
